Marked Up Version of the Amended Claims

U.S. Patent Application Serial No. 09/578,827

Matter that has been deleted from the claims is indicated by brackets and matter that has been added to the claims is indicated by underlining.

- 22 (once amended). A transgenic plant [containing] <u>comprising</u> a transgene encoding a <u>heterologous</u> gene of interest operatively associated with a *SHORT-ROOT* promoter, said promoter consisting essentially of a nucleic acid sequence of SEQ ID NO:4, so that the gene of interest is expressed in a tissue-specific manner in roots or embryos.
- 23 (once amended). The transgenic plant of Claim [21] <u>22</u>, in which the gene of interest encodes a gene product that confers herbicide, salt, pathogen, or insect resistance.
- 24 (once amended). A transgenic plant [containing] <u>comprising</u> a transgene encoding a <u>heterologous</u> gene of interest operatively associated with a *SHORT-ROOT* promoter, <u>said promoter consisting essentially of a nucleic acid sequence of SEQ ID NO:4</u>, so that the gene of interest is expressed in shoots.
- 31 (once amended). An isolated nucleic acid molecule [comprising] consisting essentially of a nucleic acid sequence of SEQ ID NO:4.
- 32 (once amended). An isolated nucleic acid molecule comprising a nucleic acid sequence which hybridizes over its full length under high stringency conditions to [the] a SHORT-ROOT promoter, which [comprises] promoter consists essentially of the nucleic acid sequence of SEQ ID NO:4 and promotes stele-specific expression in root, and wherein the high stringency conditions comprise washing in a solution composed of 2X SSC, 0.01% PVP, 0.01% Ficoll, and 0.01% BSA at 68°C.
- 33 (once amended). An isolated nucleic acid molecule comprising a nucleic acid sequence which hybridizes over its full length under high stringency conditions to [the] <u>a</u>

SHORT-ROOT promoter, which [comprises] promoter consists essentially of the nucleic acid sequence of SEQ ID NO:4 and promotes stele-specific expression in hypocotyl, and wherein the high stringency conditions comprise washing in a solution composed of 2X SSC, 0.01% PVP, 0.01% Ficoll, and 0.01% BSA at 68°C.
